Nexta

NEXT
TO INNOVATION

BRINGING THE FUTURE **CLOSER WITH NEXTA**

Technical Furniture Made in Italy

Nexta is built on a commitment to innovation, ergonomics, and reliability. This series of technical laboratory furniture is **designed to transform workspaces into state-of-the-art centers of value.**

As an **integrated furniture system**, Nexta provides technicians with an environment tailored to meet every operational demand and comfort requirement.

Nexta – Technical Furniture Systems Made in Italy. Designed for the Laboratory of the Future.

The furniture is ergonomic and made using the highest-quality eco-sustainable materials.

Nexta combines efficiency and flexibility. Its components offer infinite configuration possibilities, making Nexta a furnishing system **suitable for every type of laboratory and highly performant across multiple sectors, including pharmaceutical, chemical, and microbiological environments** (BSL and GMP areas). A series designed to meet the needs of the most complex instrumental areas.

The laboratories of the future require technical furniture capable of supporting technological progress and adapting to the evolution of the industry. Nexta meets this specific need.

FURNISHING **THE LABORATORY OF TOMORROW**

Nexta furnishing accessories create the laboratory of the future.
Workbenches are the operational core of laboratories: wall benches, central benches, islands, and peninsulas, available in different depths and heights.

The range is complemented by under-bench cabinets, multi-purpose shelves in extruded aluminium, document holders and reagent racks that are easily adjustable in height and depth, overhead cabinets mounted on the uprights of the technical module, articulated supports and extraction arms, and a wide range of services and utilities.

Each accessory can be easily configured and integrated with other elements at any time. Everything you need, within a single furnishing system.

FERRARO IS A SIGNATURE **OF QUALITY**

Built for Laboratory Requirements

A **state-of-the-art production facility** is our signature of quality for your next technical laboratory.

Nexta is an innovative concept that looks to the future of technical furniture: a range entirely designed, refined and manufactured within our own production facility. This choice ensures **full in-house control of the product** and a high level of build quality, fully aligned with the most demanding standards required by the market.

From **research and development through to prototyping**, Nexta furniture is the result of a production process monitored in every detail and optimised through advanced manufacturing technologies.

The **in-house management** of all components, supported by a team of accredited professionals, ensures that Nexta delivers:

Carefully selected materials

We choose Made in Italy raw materials according to strict criteria, in order to create furnishing components that are both robust and suitable for a wide range of practical applications, in full compliance with industry regulations.

Series modularity

From the earliest stages of the engineering process, the range was designed to offer 360° modular solutions. Each component can be assembled to meet even the most demanding requirements.

Outstanding finishes

Attention to every detail ensures an excellent overall quality and flawless, consistent finishes across every component.

Fast Lead Times

An efficient and fully controlled operational process enables a significant reduction in production and delivery times, while ensuring maximum warehouse availability. With Nexta, you can have the laboratory you want within the optimal timeframe for your project.

NEXT
TO EVOLUTION

Nexta accompanies the evolutions of laboratories

For professional laboratories, the reconfiguration of technical furniture and adaptation to future needs represent an ongoing challenge. Nexta offers a concrete solution that is **designed to resist obsolescence.**
Every furnishing element is modular: benches, cabinets, technical modules, uprights, utility management systems, and multi-purpose profiles.

Offering maximum flexibility

The range was designed to deliver maximum flexibility, durability, and ease of configuration. Innovative fixing systems and electrical connection solutions allow the laboratory layout to be redesigned quickly and efficiently. This makes it possible to meet the needs of end users today while anticipating those of tomorrow. **Nexta adapts to all requirements of space, workflow, and professional equipment.**

Modularity ensures virtually infinite configuration possibilities without the need to purchase additional components, significantly reducing long-term costs.

Nexta: a reliable, **high-performance partner** on your journey towards the future

TECHNICAL MODULE

The technical module is available in two types: **“modular”** and **“continuous”** to satisfy different needs and adapt both to projects with a strong need for future re-modularity, and to solutions with a low economic impact.

MODULAR

The modular version stands out for its **exceptional flexibility**.

Each technical module is independent from the others and can be **separated and detached from the surrounding furniture**, allowing for multiple layouts and future configurations.

It is particularly well suited **to dynamic laboratories** that undergo frequent spatial reconfigurations over time, driven by new equipment and evolving operational requirements.

CONTINUOUS

The “continuous” technical module features a single central upright.

This structural characteristic enhances **stability and robustness**, offering a practical and efficient solution at a more competitive cost.

It is a version suited to laboratories that require a **uniform, compact layout** in order to optimise the available space.

WORKBENCHES

Nexta series workbenches are available in two versions: **C-frame** or **D-frame**. Thanks to customised solutions, it is possible to create workbenches perfectly **suited to every type of instrumental laboratory.**
The benches can be equipped with technological zones for electrical services and special gases, installed above, below, or at the back of the work surface.

C- FRAME LEG

Featuring a more compact design, as the leg is fully integrated into the cabinet.

The C-frame provides greater flexibility and adaptability to different configurations.

Despite its smaller structural footprint, it leaves more space available under the bench, thanks to its open-sided design.

D- FRAME LEG

The D-frame is a solution that combines structural robustness with an attractive design.

The additional upright provides extra structural support, enhancing stability and strength.

This version is suitable for supporting heavy loads placed on the workbench.

UTILITY SUPPLY SYSTEM

With Nexta, integrating electrical, fluid, and gas services from the ceiling into the furniture system is now simpler and more functional. The utility support system allows **connections from the installations directly to the workbench.** This solution safely conceals cables and pipes while keeping water, electricity, and gas **easily accessible through visible taps and outlets**. To offer greater configuration options, Nexta's technical panels can be installed in various positions and are fully interchangeable.

The panels feature a specialised mounting system that allows users to reconfigure the placement of utilities within the technical modules **without the need for tools or specialized technicians.** For installation, the panel simply clicks into the slot manually.

UPRIGHTS

Three different types of uprights are available:

Tall upright: This 2-metre-high version extends above the technical module, allowing vertical assembly of multiple panels and the attachment of accessories such as shelves, wall cabinets, and extraction arms.

Flush upright: By customising the height of the technical element, this upright can be made to the desired height to align perfectly with the technical module.

Utility support upright: The combination of multiple uprights and technical panels enables the creation of full technical columns that cover utility risers, extending from floor to ceiling.

Upright with rail

The rail integrated into the upright allows for customised laboratory setups, making it easy to attach accessories.

MULTI-PURPOSE PROFILES

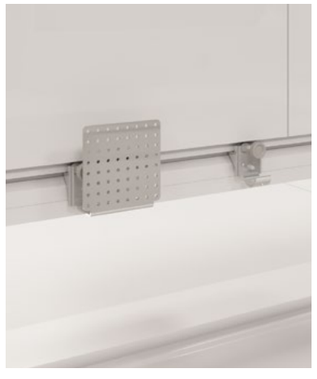

Nexta offers a **unique system of specialised multi-purpose profiles**, designed to support a wide range of laboratory accessories: PCs, printers, multi-purpose shelves, additional work surfaces, and dispenser holders. Sliding grooves in every direction provide maximum adaptability, and the profiles can be repositioned and installed anywhere within the technical module.

Accessories Supports

Flexible, easy-to-position solutions for every multi-purpose profile

Smart Device Integration

Seamless connection for **smartphones, tablets, monitors, and laptops**

REAR TECHNICAL ZONE

An aesthetically integrated solution that ensures high safety standards and keeps the workbench organised: systems, electrical cables, outlets, liquid drains, and gas and water pipes are all neatly concealed in the rear compartment.

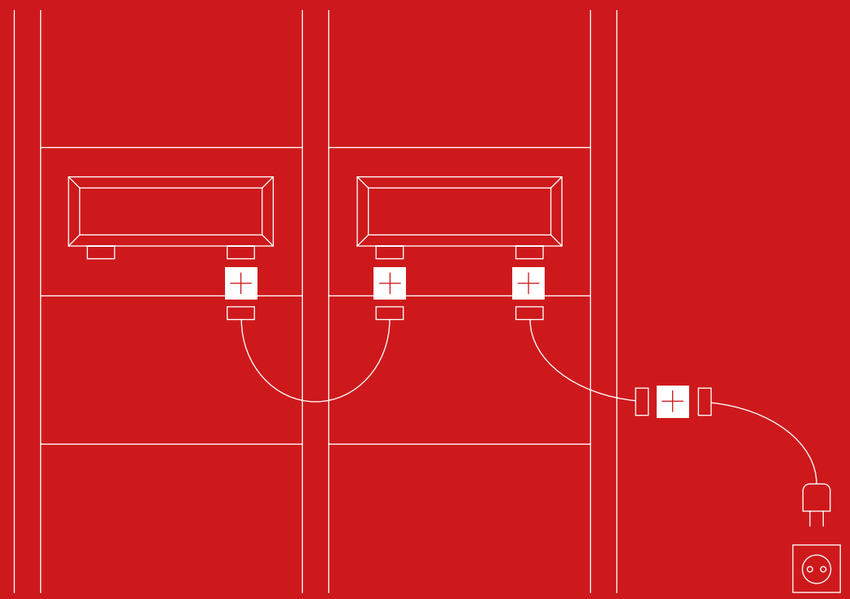

PLUG AND PLAY SYSTEM

Nexta's innovative **Plug and Play system** makes the laboratory more accessible and efficient.

Tasks such as moving technical panels or temporarily removing the back panel often require a specialised technician, slowing down laboratory workflows. Nexta overcomes this limitation: thanks to its extreme simplicity, the Plug and Play system **allows operators to configure their workspace independently**, even simplifying pre-wiring.

The electrical connection system requires no terminals behind outlets—each panel features a simple plug-in connector.

Nexta furniture is designed to give everyone the ability to work directly with installations, streamlining processes, saving time, and **significantly reducing operating costs.**

CABINETS

Nexta cabinets are more than just furniture accessories—they are purpose-designed structures that enhance organisation within the laboratory.

SUSPENDED CABINETS

The lower part of the cabinet is elevated above the floor.

The open space underneath facilitates cleaning and sanitisation—an important feature for professional laboratories.

CABINETS ON CASTORS

The cabinet on castors offers maximum flexibility: it can be easily moved and transported, thanks to the wheels that allow full mobility.

It extends all the way to the floor and can include an additional drawer, providing extra storage capacity.

NEXT
TO GREEN

Environmental Sustainability

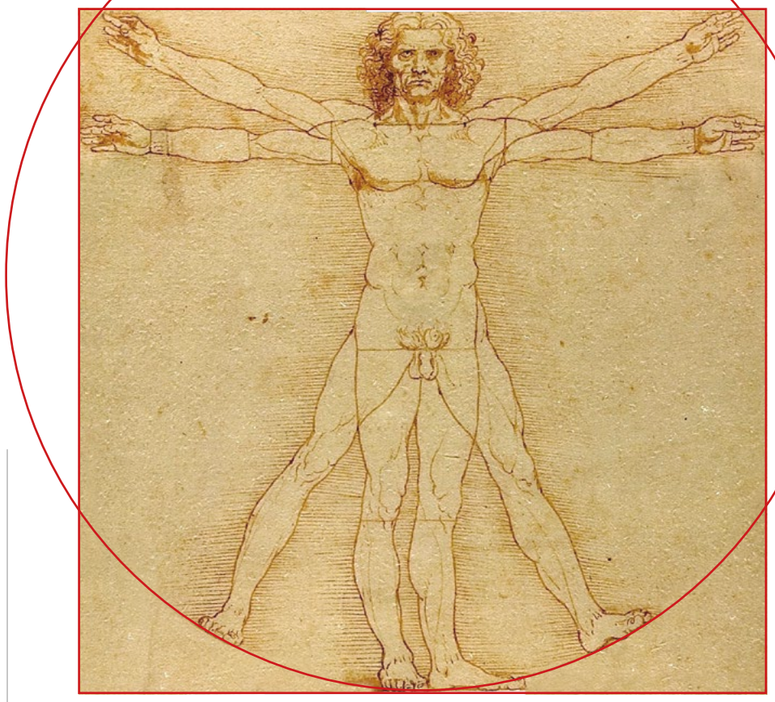

Creating a sustainable future for laboratories with Nexta. Environmental sustainability is a global goal that requires collective responsibility—from manufacturers to end users. **Ferraro AT has long followed a green philosophy**, implementing sustainable solutions at every level to minimise the environmental impact of furniture throughout all production phases. This process of innovation and research culminates in Nexta: a fully sustainable furniture range.

Circular materials. Lower impact. A vision for the long term.

Nexta's metal components are **made from aluminium and steel**—materials that are 100% recyclable. Products made from these alloys can be **recycled indefinitely.** The series is designed to adapt to changing operational needs without requiring the dismantling of existing furniture. Fully disassemblable, Nexta allows and facilitates diversification at the end of its lifecycle, minimising production waste and optimising raw material use.

The entire Nexta system **is certified under C.A.M.** (Minimum Environmental Criteria), including optional requirements set by the Ministry of the Environment and Energy Security. Compliance with these criteria guarantees the absence of polluting and harmful substances and ensures proper end-of-life management of the product.

NEXT
TO COMFORT

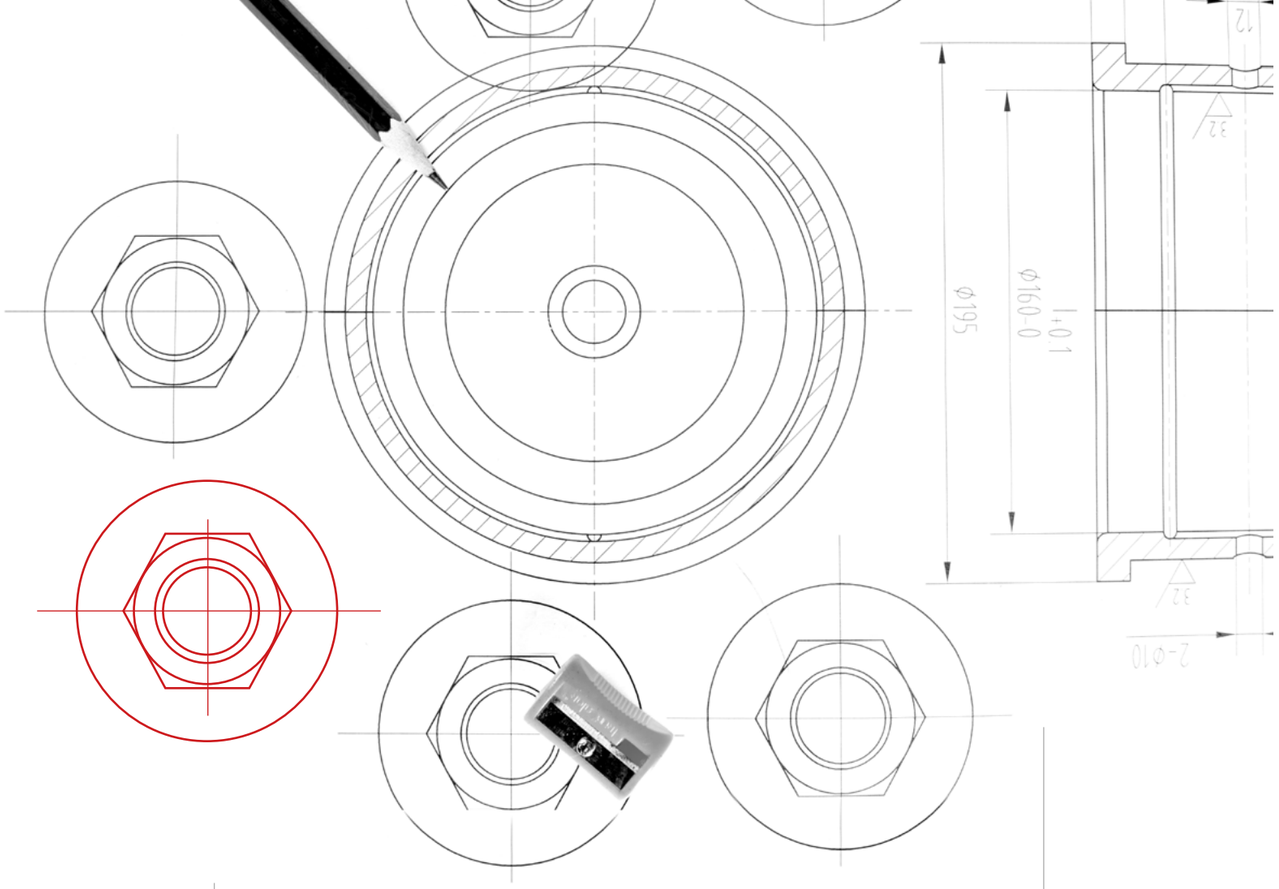

Ergonomics

Experience the laboratory in **total comfort**. Numerous scientific studies show that maintaining poor posture for prolonged periods can cause significant discomfort and increase the risk of occupational injuries. Laboratories are potentially demanding environments for the musculoskeletal system, from microscope work to typing, digital reporting, and extended observation tasks.

Operational Comfort at the heart of the technical design

Nexta was created to address this longstanding issue, **designing a laboratory around the user** and prioritising operator well-being. The range is **fully ergonomic**: each bench adapts to the physical needs of the individual user, without forcing them to compromise their ideal posture for any specific task.

Nexta helps operators **work under optimal conditions**, boosting productivity, comfort, and the long-term adaptability of the installations. Accessory heights can be adjusted to suit future needs, ensuring the furniture evolves alongside your laboratory.
Nexta is the first laboratory bench to receive the prestigious Ergocert certification, a mark of quality that reflects its commitment to ergonomics. The certification applies to benches with worktop depths of 60 and 75 cm.

CERTIFICATIONS

All furniture components comply with European standards, interpreted with the strictest requirements, as confirmed by official certifications issued by the third-party body **Bureau Veritas.**

The bench is **Ergocert** certified.

NEXT
TO PERFORMANCE

Reliability, Strength, Safety

A furniture range you can trust: **safe, efficient, and durable.**
Nexta's exceptional mechanical strength is tested and certified by the strictest control bodies, meeting the latest quality standards according to European standard EN 13150.

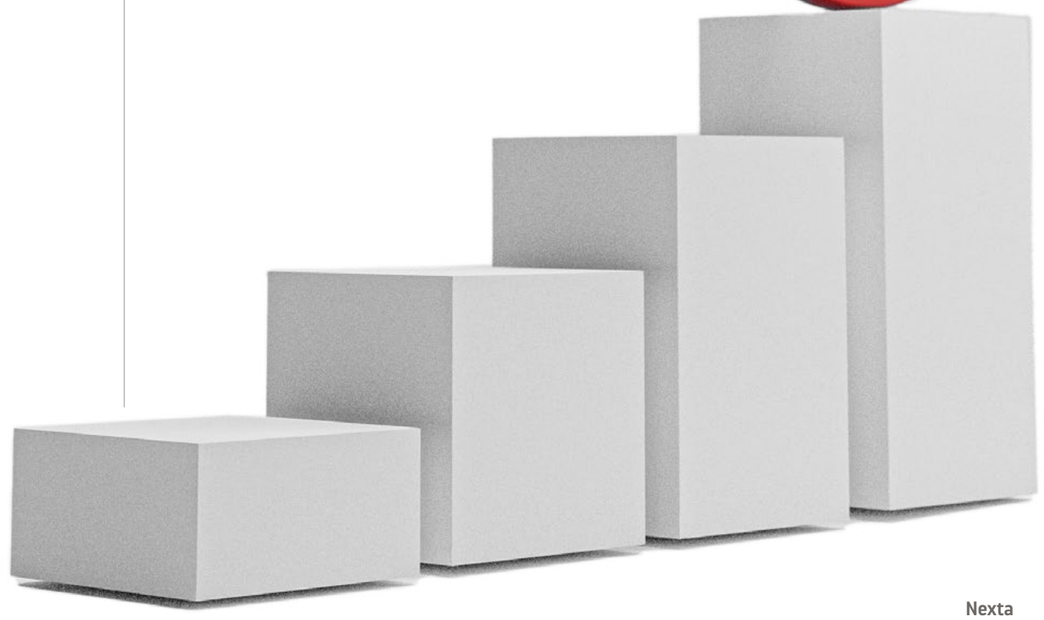

Materials have been selected to **ensure safe use in professional environments**, in compliance with strict regulations, and optimal performance that does not diminish over time.

Acid-Resistant Polypropylene Surfaces for maximum protection

The use of aluminium guarantees **lightweight construction**, ease of handling, and **outstanding durability**, enhanced by an industrial powder-coating process that strengthens the surface. Nexta combines the advantages of reduced weight with mechanical strength and structural solidity, tested by Catas.

Nexta's technical panels are **made of polypropylene**, a chemical-resistant plastic designed to extend the furniture's lifespan and **ensure top performance even in contact with acids**, both above and below the work surface.

WHO WE ARE

Ferraro Arredi Tecnici designs and manufactures Made in Italy technical furniture for cutting-edge professional laboratories. With **over 60 years of experience**, our company has evolved from a small carpentry workshop in the heart of Val Bormida into a trusted partner for some of the largest Italian and international organisations.

Our entrepreneurial spirit has driven **continuous growth**, both in production capabilities and in the quality of services offered. Today, Ferraro AT looks to the future with a clear, shared vision: constantly innovating production technologies and providing solutions that meet the evolving needs of our clients.

With a 3,000+ m² production facility and a ready-to-ship warehouse, we can guarantee fast production and delivery times while maintaining the highest quality standards at every stage. Our highly skilled team manages every detail internally, **from Research & Development to prototyping**, ensuring complete control over the final product.

Our ISO 9001, ISO 14001, and ISO 45001 certifications are tangible proof of **our commitment to quality, safety, and sustainability.** Ferraro AT is the partner that supports the evolution of tomorrow's laboratories, offering innovative, tailor-made solutions **to meet future challenges.**

TRUST FERRARO

1 **HIGH-QUALITY TECHNICAL FURNITURE**
*Our fully in-house production process allows us to deliver **numerous benefits in terms of build quality**. Ferraro AT selects only the highest-quality raw materials from qualified suppliers and ensures laboratory installations are handled by specialised technicians.*

2 **EXPERIENCE**
*With decades of technical and professional expertise, we provide an **excellent service** designed to effectively meet the evolving spatial and technological needs of modern laboratories.*

3 **SUPPORT AT EVERY STAGE**
*We offer **complimentary coordination throughout the laboratory project,** from the initial concept to final testing. Each client benefits from the dedicated technical and administrative supervision of two expert technicians assigned exclusively by our company.*

4 **AFTER-SALES SERVICES**
*We provide **warranties that exceed the legal minimum requirements.** Following acceptance testing, we remain available to laboratories with maintenance programs that preserve furniture performance and offer rapid, effective technical assistance when needed.*

5 **PRODUCTION CAPACITY**
We use state-of-the-art work centres to optimise production cycles, along with highly precise surveying and design tools capable of generating 3D layouts during site inspections. Our highly qualified team has extensive experience in furniture manufacturing, handling installation, design, and project management with expertise and care.
